

Riverside City College
CIS-832 : Introduction to Python Programming: Part 3

Synopsis → This is a non-credit course for students that want an introduction to Python. It is meant to be elementary, no prior programming experience necessary. If you acquire these Python concepts without difficulty, and enjoyed the process, then you should seriously consider taking CIS 1a and CIS 5 to explore your further potential as a coder or software engineer. If you already know how to code and want to pick up Python, then consider this an easy structured way of obtaining a good start.

1. Each Monday/Wednesday watch the short zoom recording in canvas for the topics to be covered.
2. After watching the zoom recording, do the assigned work, and post the word of the day.
3. Attend the Tuesday/Thursday Review Section in zoom for answers to questions and directions.

Instructor: [Dr. Mark E. Lehr](#)

E-Mail: mark.lehr@rcc.edu

Online Hours: Mon-Wed 5:00PM to 6:00PM → <https://cccconfer.zoom.us/j/4372081701>

Online Class Review Hours: Tues-Thurs 6:00PM to 7:30PM → <https://cccconfer.zoom.us/j/4372081701>

Outline: [hyper link](#)

No-Required Text, however, I will be using the following as a reference!

Paperback :544 pages

- ISBN-10 :1593279280
- ISBN-13 :978-1593279288

Required Materials

Anaconda → <https://www.anaconda.com/products/individual>

However, if you can't get it installed, then we will have an online backup plan.

Course Description

An introduction to Python which emphasizes data types and formatted input/output.

Prerequisite - Advisory

None – Except the ability to use the internet, install applications, follow directions, etc.....

Course Objectives

Upon successful completion of the course, students should be able to demonstrate the following activities:

1. Demonstrate fundamental knowledge of functions, arrays, and file input/output programming concepts in Python:
 - a. Creating and working with functions in Python.
 - b. Creating and working with arrays in Python.
 - c. Writing data to output files and reading data as input from files in Python
2. Demonstrate the ability of writing intermediate level medium sized programs in Python using functions, arrays and file input/output.

Grades:

Each of the three courses comprising this series (CIS 830, 831, & 832) will be graded as Pass/No Pass. The breakdown of grades in each course is as follows: 50%: Attendance (you must log your attendance for each class on Canvas, see below) 50%: Homework Assignments. In each course, a combined grade of 70% or higher will constitute a “Pass,” while anything lower will constitute a “No Pass.” As these are non-credit courses, the final grades should not be your primary focus. Rather, the focus should be on developing a new skill set and learning how you can use Python and programming in your coursework and your life.

Attendance will be tracked using assignments on Canvas. At the start of each class, complete the Canvas attendance assignment for that day by submitting the “word of the day” submit online in canvas. The word of the day will be stated somewhere in the online zoom lectures. Sometimes, class absences are unavoidable. Everyone is given one free absence that will not affect their attendance grade. Otherwise, you must attend each class, unless there is an emergency. In the event that there is an emergency, please send me an email in Canvas to let me know. Late homework may (or may not) be accepted at the discretion of the instructor. Please contact me if you feel that you need an extension on a homework assignment. Any unexcused, late homework is subject to 50% penalty.

Tentative Class Schedule(16week normal semester session)

Weeks 1-3 -> Cover Data Types/ Looping / Branching Operations

Python Arrays and Functions - Week1/Monday Night Review

Other Python Modules - Week 1/Wednesday Night Review

File Open/Read/Write - Week 2/Monday Night Review

File Delete/JSON Format - Week 2/Wednesday Night

Plotting - Week 3/Monday Night

Classes and Plot types - Week 3/Wednesday

Lab Hours

None

Statement on Academic Dishonesty:

RCC defines plagiarism as, “Presenting another person’s language (spoken or written), ideas, artistic works or thoughts as if they were one’s own.” This includes using someone else’s C++ code. Plagiarism is academically dishonest. Students must make appropriate acknowledgment of the original source where material written or compiled by another is used.” Cheating or dishonest practices, such as turning in the writing of someone else and claiming it as your own, will result in your receiving a failing grade on the assignment and possibly for the course.

ADA Information

Please let me know if you need accommodations for a documented disability. The office of Services to Students with Disabilities will also be able to provide help and assistance.

DIVERSITY STATEMENT

Riverside City College School of Business embraces a notion of an intellectual community enriched by diversity with multiple dimensions, including race, ethnicity and national origin, gender, gender identity, sexuality, class, and religion. We are particularly committed to populations that have historically been excluded from equitable participation in the classroom, higher education institutions, and our communities. Individually, we are devoted to addressing our unconscious bias to pave the way for a more inclusive curriculum and learning environment.
